# Understanding DeFi

DeFi's advantages of decentralization, low transaction costs, product versatility, and transparency are being harnessed by a growing range of innovative platforms for trading, insurance, payments, lending, and derivatives. Nevertheless, significant challenges remain:

- Decentralized Exchanges (DEXs) are plagued by limited liquidity, capital inefficiency, slow transaction speeds, and high gas costs.
- Although some DEXs (like Serum) use order books to match all option/ lending/futures positions, it cannot compare with that of major Centralised Exchanges (CEX), which nevertheless suffer from hacking and single-point of failure risks.
- Without real-time and reliable quotes on all tradable financial assets, DeFi applications will not be able to replace centralized structures, and the discontinuity of price quotes will impede the creation of reliably priced derivative products.

# The Solana Edge: How HGM Leverages A Revolutionary Blockchain

Transactions per second	<b>65,000</b>	15	100	1000	270
Average Fee/Transaction	<b>\$0.0015</b>	\$15	\$0.01	\$1	\$0.25
Transaction Latency	<b>0.4 sec</b>	5 min	75 sec	2 min	10 min
Number of validators	<b>1,000</b>	11,000	21	297	2,376
Transactions to Date	<b>15 billion</b>	1.07 billion	227 million	1.7 million	5.9 million

# HolyGrail Markets In A Nutshell

- Holy Grail Markets (HGM) solves DeFi shortcomings permanently with a comprehensive DeFi platform that offers AMM lending, options trading, DAO index investing, and AMM gamification capabilities.
- Built on Solana, the world's fastest Blockchain, HGM enables the trading of options on all crypto assets at the most competitive costs and speeds on the market. In particular, HGM's binary options bypass the problem of unreliable digital asset prices by replacing bets with a simple yes/no proposition, which requires price levels to be determined only at specific future intervals rather than continuously.
- Furthermore, no asset exchanges occur as all option outcomes are settled between users via the native HGMA token. Users can also opt to invest in DAO-governed index funds to gain exposure to the long-term growth of crypto assets. The execution and settlement of all trades occur virtually, instantaneously, and on-chain, providing protocol users a completely unprecedented trading experience.

## Trade Options With Zero Commissions

Binary options offer significant upside with limited downside. Holy Grail Markets allows you to trade binary options without commission fees simply by staking into an investable AMM program. Trade binary options on HolyGrail Markets to unlock a virtually endless world of trading strategies.

## Stake Your Crypto, Double Your Rewards

Thanks to our network of DeFi partners, when you stake HGMA tokens, you get double the rewards of a regular staking program. This means extra binary options, additional HGMA tokens, and lottery rewards every day. Find out more about our partners [here](#).

## Boost Your Returns With Investable AMM

When you join Holy Grail Markets' Investable Automatic Market Maker (AMM) facility, you supply liquidity to our partner protocols. All liquidity borrowing is done via our proprietary algorithm, minimizing the number of tokens used so you can stake (and earn) in other protocols.

## Invest In DAO Index Funds With HGMA Tokens

Our index funds give you total exposure to the performance of crypto assets, which you help select by voting in the Holy Grail Market DAO. You can choose how much of your staked HLP to invest into particular index funds, thanks to our AMM protocol.

## AMM Staking Games. Stake More, Win More

Our index funds give you total exposure to the performance of crypto assets, which you help select by voting in the Holy Grail Market DAO. You can choose how much of your staked HLP to invest into particular index funds, thanks to our AMM protocol.

# The Holy Grail Market Architecture

- Offer investors the long-term appreciation potential of the HGMA token.
- Incentivize investors to stake on the HGM protocol with the AMM functionality and additional token-based rewards.
- Provide liquidity on-demand to partner protocols, making the HLP token a cross-protocol asset and borrowing collateral.
- Offer investors a broad range of trading capabilities via crypto-based binary options.
